Working Prototype Known Problems Report
Secuure
The Hash Mappers
November 23, 2016

Functions not working correctly:

iOS-App:
1. Complete functionality with backend public server. (App completely works via a localhost server, and when accessing the public server via the localhost server, but not independently from the localhost server).
2. Encryption
3. Offline Functionality

Android-App:
1. The password generator works mostly, but has some bugs in updating any changes from the checkboxes (i.e. needing to refresh twice to register a change like having two boxes and unchecking one).
2. Encryption
3. Offline Functionality

Computer-Client:
1. Icon
2. Aesthetics in the UI
3. ScrollBars for variable amounts of buttons
4. Encryption/Decryption
5. Offline Functionality
